

Why we buy Plastic made from Corn!

Annually Renewable Resource - No Petroleum Needed

As opposed to “regular” plastics that are made from petroleum, these products are made from an annually renewable resource, corn. This helps to reduce America’s dependence on foreign oil.

100% Compostable - Made from Nature, Returned to Nature

Corn plastic products turn back into dirt in as little as 45 days in a commercial composting facility.

FAQs

“Can I eat it?”

We do not recommend eating corn plastics.

“If I have a corn allergy, will it affect me?”

No, there are no traces of allergens in the finished products

“How much resources do these products save?”

Corn plastics save about 50% of the resources that go into traditional plastics.
