

NON-SUSTAINABLE PALM OIL AFFECTS EVERYONE

Palm oil produced in a NON-sustainable way has a negative impact on the planet.

- Millions of acres of rainforest are burned or clear-cut every year. This releases huge amounts of carbon and pollutes the atmosphere.
- Many species lose their homes when rainforest is destroyed, including orangutans, elephants, tigers and hundreds of other species.
- Local people lose their land and livelihoods to non-sustainable palm oil production.
