Dear \_\_\_\_\_,

I am very concerned about the effects of non-sustainable palm oil production on rainforests in Indonesia and Malaysia. At the current rate of deforestation, orangutans and other wildlife will be extinct in just a few years

One reason palm oil production is increasing, and demand is becoming unsustainable, is due to the development of bio-fuel. Deforestation increases carbon dioxide in the atmosphere which in turn, contributes to global warming. So bio-fuel produced from palm oil is not a viable "green" solution to the energy crisis.

I have two requests:

- 1) Please support continued funding of USAID grant agreements that protect orangutans and rainforests in Indonesia.
- 2) Please support the EPA's decision not to explore palm oil as a bio fuel option.

Thank you for your consideration.

Sincerely,
